RE: Review of Final Plan / Construction Drawings
Northwood Estates Subdivision – Section 1

Dear Ellen,

The Kleingers Group has reviewed the Final Plan / Construction Drawings for Northwood Estates Subdivision Section 1 by Choice 1 dated July 7, 2025 and have the following comments/observations:

Title Sheet (1)

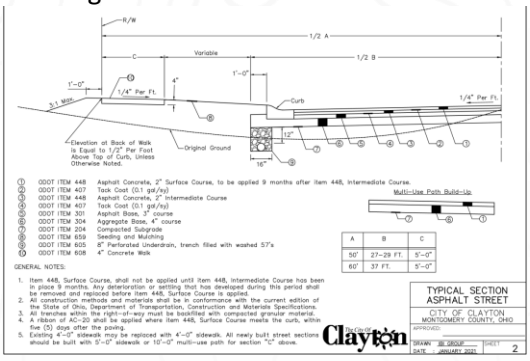
1. Vicinity Map should be noted as “Not to Scale”

Overall Plan

2. There are several text conflicts and overlapping data. Clean up display here and throughout plan set particularly for those that may not have the capability to print documents in color.

Typical Section and General Notes (3)

3. It does not appear that the typical section being used is that of Claytons. The Clayton typical section within their standard drawings dated January 2021 shows a roadway width to one foot behind the curb on either side. The Asphalt Section and Sidewalk width also does not match the Clayton Standard Drawings.



4. The Utility Statement Paragraph seems to be interrupted by the Existing Tile Hookups paragraph in the General Notes.
5. The Asphalt Walking Path Cross Section does not match the Multi-Use Path Build-Up shown in the Clayton Standard Drawings, see above, but does exceed the typical section in most cases.

Storm and Sanitary Sewer General Details (6)

6. An elevation reference is needed at the sump inlet.
7. Calculations indicate that a 5.1“ orifice is recommended for the sump and a 5.3” orifice is shown. Typically the cap and drilled hole is located at the other end of this pipe.

Street and Utility Plan (7)

8. There appears to be a conflict with an existing storm sewer within the right of way of US40. How is existing roadway swale being collected if a manhole is replacing the pipe opening prior to the driveway?
9. Previous reviews of the Traffic Impact study mention how the Multi Use Path should be addressed within the intersection of Haber and US40. Some thought should be given to showing an connection to the existing path on the south side of US40.
10. Add Major Roadway Names to the main drawing on the sheet.

Grading Plan (8)

11. There are two sheets in the set with this label.
12. Emergency Spillway cross section cuts off grading detail to creek.
13. The 999 elevation label on the west side of the detention pond is placed over the 998 contour line.
14. A detail should be given to the swale from the outlet of the pipe under Stillwater Way to the pipe invert receiving the flow.
15. Flood Routes and typical sections for those swales should be shown.

Intersection Details (9)

16. It appears that a ponding issue is being created on the north side of Stillwater Way at Haber Road.
17. Radius of Bolt Court cul-de-sac does not meet the minimum requirement of pavement radius of 38.5 feet, assuming pavement only includes asphalt and not curb.

Plan and Profile (10-19)

18. Add street centerline stationing
19. A temporary T-turnaround is needed to be shown at the stub of Stillwater Way.
20. The record plat indicates that the Utility Easements are 15’ while plan and profile sheets show the Utility Easement as 10’.
21. All waterline bends and valves need to be stationed.
22. Show pipe invert of 18-inch pipe under Haber Road on Sheet 12. Verify the condition of the pipe.
23. Extend the walk on either side of Stillwater Way to match the width of multi-use path.
24. Align services for Lot 50 with the building pad.
25. Water main on sheet 13 for Bolt Court shows it dipping to have 18” separation, but nothing is shown on the profile.
26. Move the North Arrow out of the hatching on sheet 14.
27. Move the Fire Hydrant out of the Sanitary Sewer easement on Bolt Court cul-de-sac.
28. There are 2 points labeled as Station 104 on Page 17.
29. CB 100, CB110, ST MH36, CB111 do not have the required cover over the pipe of 2 feet.

SWPPP Grading Plan and Drainage Calculations

30. Calculations not fully reviewed due to potential changes needed in storm sewer design
31. Clayton Subdivision regulations require a runoff coefficient to be 0.4 to be used in residential development.
32. The storm system from the basin to the stub of Stillwater Way is modeled differently than the design in the drawings please revise one or the other.
33. Revise Drainage area map showing matching current inlet locations. Label inlets on SWPPP Grading Plan to match drainage plan and Construction Drawings.
34. Provide an area calculation of the water area of the retention basin showing that it is at least ½ acre.
35. Provide a typical profile of the retention basin showing a safety ledge four to six feet in width approximately thirty to thirty-six inches below the permanent water level and a 5-foot berm at 2% slope beginning at least one foot above normal pond elevation. The slope between the two ledges should be stable and of a material which will prevent erosion due to wave action. Side slopes above the berm shall be 3 to one or flatter. Side slopes of the pool shall be two to one or flatter.
36. All ponds in residential subdivisions used for stormwater retention shall be designed with a fountain or aerator.

Sanitary and Water Notes

37. Please confirm that the plans have been submitted to and reviewed by Montgomery County Environmental Services (MCES).

Traffic Impact Study

38. Show that the comments from the previous review have been addressed.
39. An analysis of the intersection of US 40 and Haver Road under stop sign control needs to be added to the existing study.
40. Provide the volume calculations for the traffic signal warrant analysis and show that ODOT right turn reductions were incorporated in the analysis.

Please feel free to contact me if you have any questions regarding the above comments.

Sincerely,

William J Brock, P.E.

R E: REQUEST FOR A PRELIMINARY & FINAL SUBDIVISION PLAN FOR NORTHWOOD ESTATES SECTION 1 SUBDIVISION

Dear Ellen:

We reviewed the submitted plans for the proposed Northwood Estates Subdivision for zoning compliance with the Codified Ordinances of Clayton, Part Eleven – Planning and Zoning Code and for consistency with Plan Clayton.

Please find our comments below for consideration of approval/denial of the plans:

Project Location and Zoning

Current Parcel: M60 03012 0022

Zoning District: PDD Planned Development District (Rezoned in 2022 from RSD), Clayton Improvement District #1 Overlay, and Special Area 1 Overlay (partial).

Project History

In July 2022, Clayton City Council approved both the rezoning of the property from Residential Single-Unit District (RSD) to Planned Development District (PDD), and a Preliminary Plan for Northwood Estates.

Per the Clayton Planning and Zoning Code, Section 1161.03(I) Approval Period. Preliminary Plans are valid for 12 months. If no sections are filed within three years from the recording of the previous sections, the approval of the remainder of the Preliminary Plan is no longer effective. *The 12 months have since expired, meaning the Preliminary Plan from 2022 is no longer valid.*

Section 1111.21(I)(1) Action by City Council states: "If the application is granted, the area of land involved shall be redesignated as a "Planned Development" District (PDD) by Code. Section 1111.21(N)(1) states "The City Council shall hold a public hearing on the Development Plan. If the application is granted, the area of land involved shall be redesignated as a "PD" District (PDD) by this Code." *The property was officially rezoned to PDD on August 20th, 2022.*

The status of the Rezoning is still valid, while the Preliminary Plan is not.

Additionally, the Rezoning to PDD was a requirement of the overlay Clayton Improvement District #1, and Section 1111.22 (C)(1)(i) states that "Any development of land, or assemblage of land, with an area of five (5) acres or more, or where more than five (5) lots will be created, shall be developed as part of a planned development under this Zoning Code." According to this Section the PDD rezoning was not only appropriate for the proposed development, but it was also required since the land area involved is five (5) acres or more and more than five lots would result.

Zoning Code and Subdivision Standards

Section 1111.21 – Planned Development District

Section 1111.21 (B) - Development Standards

(1) The Development Plan must comply with the following requirements unless specifically waived by the City Council with the recommendation of the Planning Commission.
   (i) The Planned Development can be substantially completed within the period of time specified in the schedule of development submitted by the developer. **The applicant has not indicated a schedule of development.**
   (ii) The Planned Development will not jeopardize public health, safety and morals. **It does not appear the proposed project will jeopardize public health, safety, and morals**
   (iii) The streets and driveways on the site will be adequate to serve the residents or occupants of the proposed development. **Yes, the applicant is proposing public streets to serve the development. Each of the 56 homes that will be built will have an asphalt or concrete driveway to provide vehicle parking.**
   (iv) The development will not impose an undue burden on public services and facilities, such as fire and police protection. **See public service, police, and fire departments' comments.**
   (v) The Development Plan contains such proposed covenants, easements, and other provisions relating to the proposed development standards, as reasonably are required for public health, safety and morals. **Covenants were not submitted.**
   (vi) The location and arrangement of structures, parking areas, walks, lighting, and appurtenant facilities shall be compatible with the surrounding land uses, and any part of the Planned Development not used for structures, parking and loading areas, or access ways, shall be landscaped or otherwise improved. **The location and arrangement of structures, parking areas, walks, lighting, and appurtenant facilities will be compatible with the surrounding land uses. The applicant is proposing approximately 22% of the overall area of the site to be open space, which includes the multi-use path and associated green space along Haber Road.**

Section 1111.21(D) - Planning Requirements

(1) The physical character of the site shall be suitable for development in the manner proposed, without hazards to persons or property on or off the site from possible flooding, erosion, subsidence (sink holes or cave-ins), or other dangers, annoyances, or inconveniences. **The Final Development Plan includes full engineered plans to address the utilities, stormwater run-off, and erosion control. These plans were reviewed by the City's consulting Engineer to make sure that the design complies with Federal, State and Local laws and Engineering Best Practices.**
(2) The site shall have direct access to a major street and not generate traffic on minor residential streets outside the district. **The proposed single-family residential development will have one access point from Haber Road, and will eventually have a secondary access point in Section 2.**

(3) Utilities and public facilities shall be developed at no cost to the public. **Development will be subject to the applicable impact fees. Clayton staff to provide additional information.**
(4) The development shall provide for efficient, safe, convenient, and harmonious grouping of structures, uses, and facilities. **The plans appear to comply with this planning requirement.**
(5) There shall be an appropriate relationship of space inside and outside buildings to intended uses and structural features. **The proposed lots will typically be 52′ wide x 125′ deep (variations to these exact dimensions will exist throughout especially on cul-de-sacs). The minimum lot area is 6,500 square feet or 0.15 acres. The relationship of space inside and outside the proposed homes will be appropriate for the area and consistent with current development in the City of Clayton.**
(6) Provision shall be made at points of ingress, egress and within the districts (developments) to insure a free and safe flow of vehicular and pedestrian traffic. **As mentioned, the proposed development will have one primary point from Haber Road in Section 1, with a secondary access point in Section 2. Each of the new streets will have 4′ wide sidewalks on both sides of the street and there will be a 10′ multi-use path along the entire Haber Road frontage. There will be 4′ wide paths in certain portions of the neighborhood tying the neighborhood park and certain cul-de-sacs to the multi-use path on Haber Road. All considered, the roads, walks and paths shown in the plan should ensure a free and safe flow of vehicular and pedestrian traffic throughout the development.**
(7) Common open space may be required. **Common open space is provided.**
(8) Off-street parking for more than three (3) cars, service areas for loading and unloading vehicles, and areas for storage and collection of trash and garbage shall be properly screened. **Each house will have a garage, and room on the driveway for additional car parking. Typically, the proposed Covenants will address some of the other items in this section, including trash can storage, etc.**

Section 1111.22 – Clayton Improvement District #1 Overlay (CID1-O)

Section 1111.22 (C) - General Provisions

(1) Planned Development Required. Any development of land, or assemblage of land, with an area of five (5) acres or more, or where more than five lots will be created, shall be developed as part of a planned development under this Zoning Code. **The overall area of the previously approved Preliminary Plan is 33 acres. The proposed Preliminary and Final Plan has an overall area of 17.135 acres. As such, the proposed Rezoning from RSD to PDD was and is not only required by this Code section but was and is appropriate for the proposed development.**
(2) Submittal Requirements. (no comments)
(3) Uses.
  (i) Uses shall be regulated by the underlying zoning district, planned development district, and any applicable regulations of this chapter. **Per planned development, the proposed use for this property is a single- family residential development.**
  (ii) *Unless otherwise modified by the planned development review process* in accordance with this chapter, *the maximum suggested gross density* of residential development shall be 2.5 units per acre. **The proposed density for this single-family residential development is 3.27 dwelling units per acre and is consistent with the formerly approved Preliminary Plans. If the 3.874 acres of open space are removed from the equation, the net density is 4.22 units per acre.**
  (iii) The Planning Commission and City Council may approve additional uses if they meet the purpose and intent of the City of Clayton Land Use Plan as it relates to the subject property. **The proposed development is strictly for 56 single-family residences, including public roads, sidewalks, multi-use path, and other neighborhood amenities.**

(4) General Design Standards.

(i) The entire land area of a development shall be divided into blocks, streets, lots, public spaces. The blocks, streets and lots should be organized into a network of interconnected streets to the maximum extent feasible. **The proposed single-family residential development is divided into blocks, streets, lots and public spaces that are served by interconnected streets and pedestrian paths.**

(ii) Similar land categories shall generally front across streets. Dissimilar categories shall abut at rear lot lines. Corner lots that front on streets of dissimilar use shall be setback the same as the adjacent use with the lesser setback. **The proposed development proposes only one land category (single-family residential) and therefore all lots and structures will front across the public streets.**

(iii) All uses shall be conducted within complete enclosed buildings unless otherwise specified. **The proposed development is for single-family residences, which is a use conducted completely within an enclosed building, but each lot will have room for outdoor enjoyment and recreation, including things like decks, porches, swimming pools, fences, and yard space.**

(iv) All setbacks shall be established though the planned development process. **As mentioned earlier, the proposed residential development is proposing a typical lot size with standard minimum setbacks, including twenty-five (25) foot front yard, five (5) foot side yard and thirty (30) foot rear yard.**

(v) All utilities shall be located underground to the maximum extent feasible. **For all new development in the City of Clayton, it is the expectation of the Development Department that all utilities will be installed underground, except for utility pedestals/boxes and meters that require location above ground for maintenance and servicing.**

(5) Anti-monotony Requirements. ***Applicant has not provided floor plans or elevations.***

(i) Single-family or two-family dwellings in proximity to each other on the same street shall not look alike. For the purposes of this requirement, "dwellings in proximity" shall mean the lot on either side of the subject property and the lots directly across the street from those three lots.

(ii) Residential dwellings shall differ from one another in two of the following:

a. Wall or siding materials;
b. Architectural style;
c. Major addition features such as porches or turrets;
d. Roof type or shape;
e. Building footprint; or
f. Window and door orientation.

(6) Floor Plan/Elevation Review. ***Applicant has not provided floor plans or elevations.***

(i) In addition to the anti-monotony standards above, the applicant shall submit illustrations and information on the floor plans, in particular, the building elevations for dwelling units as part of the submittal requirements.

(ii) The Planning Commission shall have the authority to review and approve or deny the use of certain floor plans and elevations for use in approved planned developments. However, such decision shall only be made based on the external appearance of the floor plan and not the internal layout of the dwelling.

(iii) Applicants may seek approval of additional floor plans, after initial approval of the planned development, by submitting the proposal floor plans to the Planning Commission for review in accordance with this section.

(iv) The Planning Commission shall review the floor plans:

a. To ensure compliance with the building material requirements of Clayton Improvement District;

b. To encourage building designs where garages are side entry, rear entry, or in the cases affront entry garages, ensure that the garages are flush with the front of the building or setback so they do not protrude in from the front facade line; and
c. To ensure a diversity of housing styles that will comply with the anti-monotony standards above.

Section 1111.22(D) - Provisions for Special Area 1 (Only the southern half of the subject property, nearest to National Road, is located within Special Area 1 of the Clayton Improvement District #1 Overlay)

(2) Permitted Uses and Density.
i. The maximum gross density of residential use permitted in this area shall be 2.5 units per acre if only the minimum public space requirements are met. **The proposed density for this single-family residential development is 3.27 dwelling units per acre and is consistent with the formerly approved Preliminary Plans. If the 3.874 acres of open space are removed from the equation, the net density is 4.22 units per acre.**
ii. The Planning Commission and Council may permit a maximum gross density of four units per acre provided that the applicant provides a minimum of 20% public space that meets the standards herein. **This section only applies to the southern half of the subject property, but overall, the proposed density is 3.27 dwelling units per acre with approximately 22% of open space, including the multi-use path. In any case, the Planning Commission and City Council, through the Planned Development process, can approve a density that is different than what this section suggests. It should be noted that Planning Commission and City Council have already approved this density.**
iii. The primary use of this area should be single-family detached dwellings. **The proposed use for this entire property is single-family detached dwellings.**
iv. A maximum of 20 percent of the dwelling units (in Special Area 1) may be attached housing provided the dwellings are attached through common walls with individual exterior entrances for each unit. Such units should be focused around the Towne Center (Village of North Clayton), Hoke Road and National Road. **Does not apply.**
v. Nonresidential uses may only be permitted when such use conforms with the City of Clayton Land Use Plan or any amendment thereto. **No nonresidential uses are proposed with the proposed development.**

(4) Landscaping and Buffering
v. A landscape plan shall be submitted with the planned development to illustrate compliance with these requirements and shall include indication of a maintenance plan. **A Landscape Plan has not been provided.**
vi. A lighting plan shall be submitted with the planned development to demonstrate that all outdoor lighting of buildings, parking areas, or signage shall not have a negative impact on adjacent properties. **A Lighting Plan has not been provided.**

(5) Fences
iii. The construction materials and colors of walls and fences on nonresidential properties shall be uniform and compatible with the architectural style, color, and building materials of the principal building and its surroundings unless the wall or fence is not visible from a public right of way. **The plan does not show an indication of fencing, but if fencing is proposed as part of the entry features or open space areas, details should be required as part of this submittal.**

(6) Public Space Requirement
i. For all planned developments with more than twenty-five (25) acres, a minimum of five percent (5%) of the project area shall be reserved as improved public spaces. Improved public spaces shall be approved by the Planning Commission and may include:

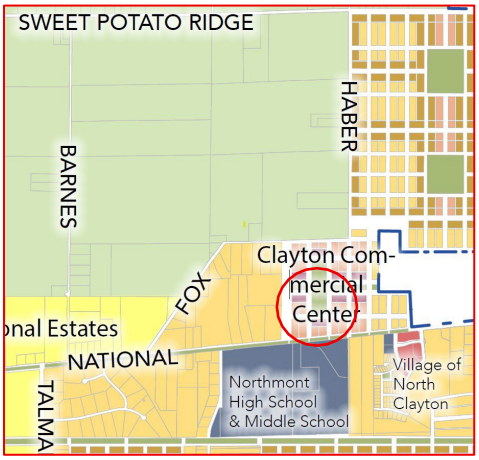
(a) Playgrounds and improved parks;
(b) Community centers;
(c) Swimming pools;
(d) Improved ponds;
(e) Picnic facilities;
(f) Public plazas that may serve as gathering places for residents;
(g) Other improved areas that may be used by the public as approved by the Planning Commission.

The proposed plan complies with this requirement; a total of 22% of the development (3+ acres) will be public spaces, including a multi-use path and linear park along Haber Road. In addition, all of the streets in the subdivision will have sidewalks on both sides of the street for residents to enjoy.

ii. For all planned developments with more than twenty-five (25) acres, an additional ten percent (10%) of the project area shall be reserved as common spaces that may include natural areas, common open spaces, or additional public spaces. **As mentioned above, the applicant has provided ample public space and common open space for the size of the development. About 22% of the property (3+ acres) will be common open spaces.**

Consistency with Plan Clayton

The proposed area is planned for what is called the "Clayton Commercial Center" – Parks, Mixed-Use, and Flex-Use designations are identified.



The New Regulating Plan (Page 38 of Plan Clayton).

The creation of 56 single-family residential lots and 2 open space lots is consistent with Plan Clayton. Plans are substantially similar to the Preliminary Plans from 2022, including the street layout and multi-use path location. The following goals from Plan Clayton emphasize the important elements of development to fulfill the vision set forth within the plan:

Goal 1. Creating Walkable Neighborhoods – The Northwood Estates development will be connected with sidewalks and a multi-use path that eventually can be connected to the existing bicycle path along National Road.

Goal 4. Great Streets and Infrastructure – Pages 86-87, PLAN Clayton summarizes four objectives of the goal area, including #2 Increase Multi-Modal Connectivity. The Northwood Estates development meets this objective by adding a multi-use path along the Haber Road frontage.

The current plans fall short of the plan's objectives to provide street trees as no landscaping plans are provided in the application. Additionally, no floor plans or elevations were provided.

Final Observations/Comments/Questions

Overall, the development generally complies with all applicable standards. Further information is needed on the development schedule, open space, landscape, and lighting improvements to fulfill some of the remaining code requirements and to meet the city's larger goals for harmonious residential development, indicated in Plan Clayton.

- Provide sketches of the proposed structures and landscaping, including street trees per the requirements of Section 1111.22 and confirmation that the anti-monotony requirements will be followed.

- Provide Lighting Plan for the development that meets Section 1111.22.

Please let us know if you have any questions or need further clarification.

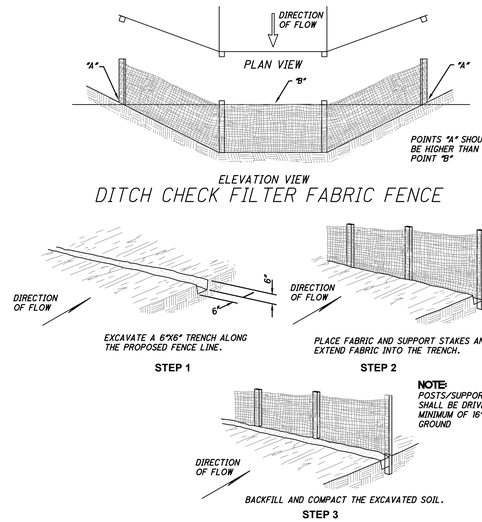
I. SEAMS BETWEEN SECTIONS OF SILT FENCE SHALL BE OVERLAPPED WITH THE END STAKES OF EACH SECTION WRAPPED TOGETHER BEFORE DRIVING INTO THE GROUND.

J. MAINTENANCE - SILT FENCE SHALL ALLOW RUNOFF TO PASS ONLY AS DIFFUSE FLOW THROUGH THE GEOTEXTILE. ALL THE GAPS AND TEARS IN THE FENCE MUST BE ELIMINATED AND REPAIRED. IF RUNOFF OVERTOPS THE SILT FENCE, FLOWS UNDER OR AROUND THE ENDS, OR IN ANY OTHER WAY BECOMES A CONCENTRATED FLOW, ONE OF THE FOLLOWING SHALL BE PERFORMED, AS APPROPRIATE: 1) THE LAYOUT OF THE SILT FENCE SHALL BE CHANGED, 2) ACCUMULATED SEDIMENT SHALL BE REMOVED, OR 3) OTHER PRACTICES SHALL BE INSTALLED.



DITCH CHECK FILTER FABRIC FENCE

SPECIAL EQUIPMENT SHALL BE USED WHEN THE REQUIRED COMPACTION CANNOT BE OBTAINED WITHOUT IT. THE MOISTURE CONTENT OF FILL MATERIAL SHALL BE SUCH THAT THE REQUIRED DEGREE OF COMPACTION CAN BE OBTAINED WITH THE EQUIPMENT USED. THE EMBANKMENTS OF THE SEDIMENT BASIN AND THE AREAS THAT LIE DOWNSTREAM OF THE POND MUST BE STABILIZED.

D. PIPE SPILLWAY -THE PIPE CONDUIT BARREL SHALL BE PLACED ON A FIRM FOUNDATION TO THE LINES AND GRADES SHOWN ON THE PLANS. CONNECTIONS BETWEEN THE RISER AND BARREL, THE ANTI-SEEP COLLARS AND BARREL AND ALL PIPE JOINTS SHALL BE WATERTIGHT. SELECTED BACKFILL MATERIAL SHALL BE PLACED AROUND THE CONDUIT IN LAYERS AND EACH LAYER SHALL BE COMPACTED TO AT LEAST THE SAME DENSITY AS THE ADJACENT EMBANKMENT. ALL COMPACTION WITHIN 2 FT. H. SEDIMENT CLEANOUT - ACCUMULATED SEDIMENT SHALL BE REMOVED FROM THE SEDIMENT STORAGE ZONE ONCE IT EXCEEDS 50 PERCENT OF THE MINIMUM REQUIRED SEDIMENT STORAGE DESIGN CAPACITY AND PRIOR TO THE CONVERSION TO THE POST-CONSTRUCTION PRACTICE UNLESS SUITABLE STORAGE IS DEMONSTRATED BASED UPON OVER-DESIGN. THIS ELEVATION SHALL BE MARKED ON A CLEANOUT STAKE NEAR THE CENTER OF THE BASIN. SEDIMENT REMOVED FROM THE BASIN SHALL BE PLACED SO THAT IT WILL NOT ERODE.

I. FINAL REMOVAL - SEDIMENT BASINS SHALL BE REMOVED AFTER THE UPSTREAM DRAINAGE AREA IS STABILIZED OR AS INDICATED IN THE PLANS. DEWATERING AND REMOVAL SHALL NOT CAUSE SEDIMENT TO BE DISCHARGED. THE SEDIMENT BASIN SITE AND SEDIMENT REMOVED FROM THE BASIN SHALL BE STABILIZED.

OPERATIONS AND MAINTENANCE

SEDIMENT BASINS SHALL BE INSPECTED ON A WEEKLY BASIS AND AFTER EACH RUNOFF EVENT. NECESSARY ACTIVITIES ARE SHOWN AS FOLLOWS:

A. ESTABLISH VEGETATIVE COVER AND FERTILIZE AS NECESSARY TO MAINTAIN A VIGOROUS COVER IN AND AROUND THE SEDIMENT BASIN.

B. REMOVE UNDESIRABLE VEGETATION PERIODICALLY TO PREVENT GROWTH OF TREES AND SHRUBS ON THE EMBANKMENT AND SPILLWAY AREAS.

C. PROMPTLY REPAIR ERODED AREAS. REESTABLISH VEGETATIVE COVER IMMEDIATELY WHERE SCOUR EROSION HAS REMOVED ESTABLISHED SEEDING.

D. PROMPTLY REMOVE ANY BURROWING RODENTS THAT MAY INVADE AREAS OF THE EMBANKMENT.

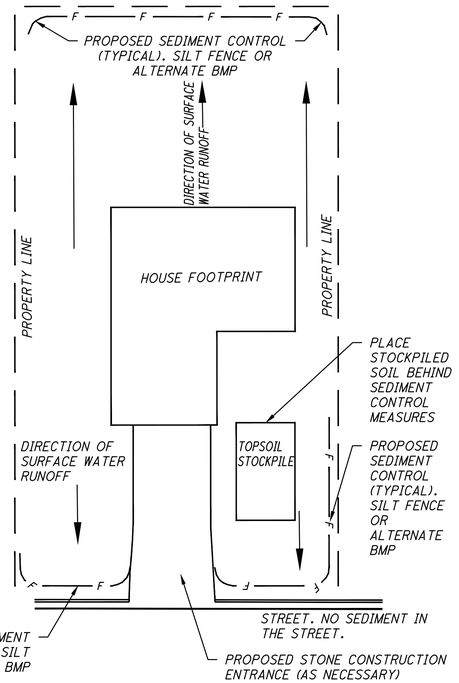
E. REMOVE TRASH AND DEBRIS THAT MAY BLOCK SPILLWAYS AND ACCUMULATE IN THE POND.

F. CHECK SPILLWAY OUTLETS AND POINTS OF INFLOW TO ENSURE DRAINAGE IS NOT CAUSING EROSION AND THAT OUTLETS ARE NOT CLOGGED. REPLACE DISPLACED RIPRAP IMMEDIATELY.

ROCK PAD NOTE

IT IS VERY IMPORTANT THAT A ROCK PAD BE CONSTRUCTED TO THE HEIGHT OF THE TOP OF THE SEDIMENT STORAGE ZONE. IF THIS IS NOT DONE OR IF THE PAD IS NOT BUILT TO THE SAME HEIGHT AS THE TOP OF THE SEDIMENT STORAGE ZONE, THE SKIMMER WILL NOT FUNCTION PROPERLY .

WHEN COMPLETE THE IAS FLEXIBLE COUPLING SHOULD BE LYING FLAT ON THE ROCK PAD. THE UNIT WILL BE TOUCHING AT TWO POINTS: THE TOP OF THE BARREL/MIDDLE OF THE SKIMMER HEAD AND THE POINT AT WHICH THE BARREL IS ATTACHED TO THE IAS FLEXIBLE COUPLING. SEE MANUFACTURER'S ASSEMBLY INSTRUCTIONS.



NOTES

A. THIS IS A TYPICAL DRAWING. APPLICANT IS RESPONSIBLE FOR MAKING THE CHANGES PERTINENT TO EACH LOT/SITE.

B. REDUCE SEDIMENT LEAVING THE SITE BY IMPLEMENTING BEST MANAGEMENT PRACTICES (BMPs) SUCH AS:

- LIMIT MUD TRACK-OUT ONTO PRIVATE OR PUBLIC STREETS BY PARKING ON PAVED STREETS OR DRIVEWAYS WHENEVER POSSIBLE. IF NECESSARY, UTILIZE A TEMPORARY GRAVEL DRIVE.
- CLEAN UP ANY MUD THAT HAS BEEN TRACKED OFF THE CONSTRUCTION SITE IN A THOROUGH AND TIMELY MANNER.
- IMPLEMENT SEDIMENT CONTROLS ALONG THE LOWER SIDES OF THE PROPERTY TO PROTECT ADJACENT WATERWAYS, STORM DRAINS OR NEIGHBORING PROPERTY FROM SEDIMENTATION.
- KEEP A CLEAN SITE. DISPOSE OF CONSTRUCTION WASTE MATERIALS AND DEBRIS IN A DUMPSTER OR CONTAINMENT DEVICE.
- HAVE YOUR PORTABLE TOILET STAKED AND ANCHORED AWAY FROM ANY STORM DRAIN INLETS.
- INSPECT YOUR SITE WEEKLY AND AFTER RAIN EVENTS TO FIND ANY POTENTIAL PROBLEMS AND KEEP YOUR BEST MANAGEMENT PRACTICES REPAIRED AND IN GOOD WORKING ORDER.
- MAINTAIN A VEGETATION BUFFER WHERE POSSIBLE AROUND THE PERIMETER OF THE SITE.
- A CONCRETE WASHOUT PIT OR WASHOUT CONTAINER SHOULD BE MAINTAINED AND USED UNTIL ALL CONCRETE WORK IS COMPLETE.

Storm Water Detention Calculations

May 20th, 2025

Site Description:
Site is an existing open row crop field that currently has no onsite detention to control the storm water runoff. The proposed site will increase the impervious area and require a retention basin on site to control the runoff. This basin will be sized to control the existing and additional runoff that will be produced by the increased impervious area and will serve as water quality measures.

Hydrologic Methodologies:
The hydrologic methodology used for this design was the Soil Conservation Service (SCS) TR-55 Method, which was computed via the Bentley PondPack program.

Existing Hydrologic Conditions:
The storm water on the existing site moves via overland flow through row crop farm field to the south where it enters an existing swale and flows into a under drive culvert into a tributary to the Stillwater River.

Developed Hydrologic Conditions:
The proposed site will move the rain water via proposed swales and storm sewer. Once the storm water has entered the storm sewer it will then be carried to the proposed retention basin. The basin will allow the water to pool, sediment to settle, and keep the allowable rates determined by the critical storm calculation.

Storm Water Management Plan:
The proposed site will move the runoff through the site by having the proposed pavement and ground sloped towards proposed trench drains and catch basins. Once the water enters the storm structures, it will then travel through proposed storm sewer to the retention basin.

Applicable Permits:
The Ohio Environmental Protection Agency, Notice of Intent.

Calculation Sheets:
Below is a summary of the storm water detention calculations. Please see the attached computer printouts for additional details.

Hydrologic Soil Group C/D was used for these calculations based upon soil in the surrounding area. A soil map from the USDA's Web Soil Survey website was utilized to determine this Soil Group.

Proposed Detention Basin

- Time of Concentration (Tc)
  - Pre-developed drainage area = 20 minutes (0.333 hrs)
  - Post-developed drainage area = 15 minutes (0.250 hrs)
- CN Number
  - Pre-developed = 85 – see page 5 of 32 of computer calculations
  - Post-developed = 90.3 – see page 4 of 32 of computer calculations
- Pre-Drainage Area = 16.03 acres
- Post-Drainage Area = 15.38 acres

Pre-developed Hydrograph Volume		Post-developed Hydrograph Volume	
Storm	Peak Volume	Storm	Peak Volume
1 year	1.557 ac-ft	1 year	1.995 ac-ft
2 year	1.880 ac-ft	2 year	2.301 ac-ft
5 year	2.668 ac-ft	5 year	3.129 ac-ft
10 year	3.254 ac-ft	10 year	3.933 ac-ft
25 year	3.969 ac-ft	25 year	4.460 ac-ft
50 year	4.457 ac-ft	50 year	4.953 ac-ft
100 year	5.074 ac-ft	100 year	5.573 ac-ft

- Critical Storm Calculation using Hydrograph Volumes. Volume provides a 5-year critical storm. On page 2 of the Pond Pack calculations it shows the Hydrograph volumes. The calculation would be as follows: ((1.995-1.557)/1.557) = 0.2813 = 28.13%. Therefore a 6-year critical storm shall be used.
- Storm Requirements = Control runoff from a 1, 2 and 5-year storm on the post developed site to the runoff from a 1-year storm on the pre developed site. Then control the runoff from the 10, 25, 50 and 100-year storm on the post-developed site to the runoff from their respective storms for the pre-developed site.
- Detention Volume provided to an elevation of 996.50 = 4.098 acre-feet – see page 6 of 32

Proposed Detention Basin Summary:

STORM	PEAK INFLOW	PEAK OUTFLOW	ALLOWABLE FLOW	STORAGE	PEAK BASIN ELEVATION
1 YEAR	28.34 cfs	4.07 cfs	19.83 cfs	1.030 ac-ft	993.35
2 YEAR	33.26 cfs	5.74 cfs	19.83 cfs	1.186 ac-ft	993.54
5 YEAR	44.54 cfs	8.16 cfs	19.83 cfs	1.603 ac-ft	994.02
10 YEAR	52.68 cfs	10.38 cfs	41.25 cfs	1.891 ac-ft	994.34
25 YEAR	62.53 cfs	12.46 cfs	50.20 cfs	2.260 ac-ft	994.74
50 YEAR	69.32 cfs	13.71 cfs	56.30 cfs	2.512 ac-ft	995.00
100 YEAR	77.12 cfs	14.91 cfs	63.56 cfs	2.821 ac-ft	995.31

NOTE: The post developed release rates for the 1 through 100-year storms are less than the 1-year pre-developed release rates. This exceeds the critical storm method requirements.

Water Quality Calculations per OEPA Requirements

Below is a summary of the storm water runoff water quality calculations that are needed to meet the OEPA water quality requirements for the development.

- Retention Pond:
  - Release the runoff from a 0.90" rain event on the drainage area over 48 hours or longer.
  - The first half of the total volume generated by the runoff from a 0.90" rain event must be detained for greater than 16 hours.

Water Quality Volume Calculations

- Post-Construction storm water management water quality volume for development using 0.90 inches of rain:
  - WQ_v= 0.59*0.90*15.38/12=0.6806 AC-FT
  - 0.745 AC-FT Provided to elev. 993.00. Therefore 0.745>0.6806 and water quality volume is detained.

Water Quality Release Rate Calculations

Detention Outlet Structure consists of:

- A 5.00" diameter orifice at invert 992.00 would be required to hold back the water quality runoff from the site.
- Per the draw down calculation we satisfy the requirement of not releasing more than 50% before 8 hours and not more than 100% by 24 hours. Per the calculations the pond releases about 31% at 8 hours and about 95% at 24 hours.

Pond Volume Equations
* Incremental volume computed by the Conic Method for Reservoir Volumes.

Volume = (1/3) * (EL2 - El1) * (Area1 + Area2 + sqr(Area1 * Area2))

where:	EL1, EL2	Lower and upper elevations of the increment
	Area1, Area2	Areas computed for EL1, EL2, respectively

WATER QUALITY CALCULATIONS

Project: Northbrook Estates WQv Calculations
Location: City of Clayton, Montgomery County

Job No:
Date: 05/20/2025

OEPA REQUIREMENTS :
1) Release the runoff from a 0.90" rain event on the drainage area over 24 hours or longer
2) The first half of the total volume generated by the runoff from a 0.90" rain event must be detained for greater than 8 hours

WQv VOLUME CALCULATIONS USING 0.9" OF RAIN - WQv = Rv*P(0.90 inches)*A(acres)/12

Precipitation (Inches)	**0.9**		
Area (Acres)	**15.38**	←	
Impervious %	**60%**	←	
Rv	**0.59**		
WQv (CF)	**29,645.41**	**0.6806**	**AC-FT**

WQv = 0.59*0.9*15.38/12 = 0.6806 AC-FT = 29,645 CF
DETENTION BASIN HOLDS 32,452 CF AT ELEV. OF 993.00. 32,452 CF > 29,645 CF THEREFORE WQv SATISFIED. THEREFORE MUST RELEASE WQv THRU PROPERLY SIZED ORIFICE UNTIL 993.00 TO ENSURE WQv IS PROPERLY DETAINED AND RELEASED.

WQv DRAW DOWN CALCULATIONS

INSTALL 5.1" ORIFICE IN OUTLET STRUCTURE AT INV. ELEVATION 992.00 WILL RELEASE WQv AT REQUIRED RATE

Per the OEPA Method 1 Maximum Hydraulic Head WQv orifice draw down calculations below, we satisfy the requirement of not releasing more than 50% before 8 hours and not more than 100% by 24 hours for a wet detention basin. Per the calculations a 5.1" orifice or smaller will adequately detain the WQv longer than the required 24 hours timeframe.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Montgomery County, Ohio
Survey Area Data: Version 23, Aug 28, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 18, 2023—Aug 4, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.
